

## **ISG GROUP starts the promotion of 2 photovoltaic plants in Cáceres.**

*Calonge, 17-03-2019*

Grupo ISG, through its 2 subsidiaries, Tamesol and Catwatt, starts the promotion of 2 photovoltaic plants located in the Extremaduran municipality of Casar de Cáceres. Called under the name of ISG El Higueral and ISG El Baldío, both plants exceed the power of 50 MWp, spread over 81 hectares and with a total investment exceeding € 35 million. In order to start the development process, it has submitted guarantees for a value of more than € 2M as guarantee for the execution of the plants. The estimated time of development of both plants is 9 months, adding another 6 months for their connection to the electricity grid.

Once the projects have completed their development phase, Grupo ISG, through its subsidiary Catwatt, will be responsible for the engineering, construction management and construction of the plants; and Tamesol to supply the components and internal logistics.

The Group is in the negotiation phase with several investment funds interested in acquiring ownership of the plants.

At the same time, it focuses its efforts on the acquisition of several lands, in order to increase its development capacity to 300 MW before the end of 2021.

The high price of electricity added to the high solar radiation, results in yields greater than 10%.

Grupo ISG, through its subsidiaries, offers a full guarantee of its plants. There are already more than 13 years of experience that accumulate, being very well positioned in a national market that is in full boil.
